STAFF DEVOPS ENGINEER

February 2017 - PRESENT

I maintain and deploy a pure cloud based infrastructure for medical and health analysis in AWS and Heroku. We utilize terraform, saltstack, and ansible for configuration and infrastructure management. Major personal accomplishments include leading the work to migrate our entire software stack to containerization utilizing docker and ECS as well as migrating every team to Jenkins Pipelines for CI/CD. Backend services are Python/Flask and Ruby on Rails. Supported frontend development in React. Working heavily with Ubuntu/Debian, NGINX, RabbitMQ, uwsgi, Spark, and Jupyter.

SENIOR DEVOPS ENGINEER

May 2014 - February 2017

- I worked on the design of as well as the deployment and management of a large-scale, hybrid infrastructure that supports the analysis of malware and the global deployment of network security systems. Managed configurations in the Linux environment using Puppet, Ansible, and Fabric. Developed utilities and backend code in Python, C, Shell, and Ruby. I led the effort to replace a large NFS system with ceph for large-scale object storage.

SENIOR SYSTEMS AND SECURITY ENGINEER

Jan 2012 - August 2012

- Main responsibilities include design, installation, configuration, monitoring, and threat management in a Linux environment, and overseeing a large infrastructure distributed over multiple datacenters. Web infrastructure consisting mostly of Apache, MySQL, and PHP; averaging 4-5 billion pageviews per month.
